## Continue discussion from AWF Roadmap Meeting, OAD Kit 3.0.

- Numerous points and options for optimizing single container performance suggested, and in line with separating static versus dynamic container components, i.e. avoid including components in update container that are mostly static (not often changed via an update). E.g. Kaper's discussion (need to add link).
- Further discussion on feedback coming out of AWF Roadmap meeting (Kasper's three states slide for reference).

## Review of backlog actions / open issues / schedule

---

### Outstanding actions

- OTA TierIV update differentially (tanzawa san will check internally)
- Lucas Liu will check if there could be presentation of AMD Xilinx AD hardware solutions
- Armağan will check if we could share the Masterclass videos

### Issues

-  [Update documentation site to add OADK 2.0 installation instructions](#) autoware-projects#46
