Description

This PR fixes slow performance reported on [autowarefoundation/autoware_ai#23](#)

VectorMap Library keeps trying to subscribe to the vector map indefinitely. Added new overload to add maximum number of retries.

Related PRs

[#980](#)

Todos

- ☒ Tests
- ☒ Documentation

Steps to Test or Reproduce

1. Play Rosbag with point cloud data available
2. Launch Euclidean clustering from Computing tab using the same input topic as the data from 1
3. Execute in a terminal `rostopic hz /points_cluster`

Performance should be back to normal.
