- ☐ Build only RViz plugin packages and split them into a separate container #5076
- ☐ Reorganize the autoware.universe/common packages #5077
- ☐ Reorganize the autoware.universe/evaluator packages #5078

Create a build stage that includes only the [autoware.universe/map](#) and [autoware.universe/localization](#) packages. This is part of the second step in the Discussions post. Since separating mapping and localization into different containers might introduce performance issues, they will temporarily remain in the same container.
