Checklist

- ☑ I've read the [contribution guidelines](#).
- ☑ I've searched other issues and no duplicate issues were found.
- ☑ I've agreed with the maintainers that I can plan this task.

Description

Create a `.vscode` folder with a `settings.json` file associating the `*.schema.json` with the `*.param.yaml` file.

Purpose

Helps make developers more efficient when creating new or modifying existing ROS node parameter files.

Possible approaches

Example of `settings.json` in `.vscode` folder.

```
{
    "yaml.schemas": {
        "./perception/lidar_apollo_segmentation_tvm_node
    }
}
```

Definition of done

Every ROS node which adapts the new ROS Node Configuration will need to add a line in the `settings.json` file, see example above.
